Fog machines work by heating a special fog fluid, which is then expelled through a nozzle to create a fog effect.

Types of Fog Machines

Before diving into the celebration instructions, it's essential to understand the different types of fog machines available on the market:

1. **Low-lying Fog Machines:** These machines create a dense fog that stays close to the ground, making them ideal for dramatic effects at events like weddings or theatrical performances.
2. **Standard Fog Machines:** These are the most common type of fog machines, producing a cloud of fog that rises and disperses throughout the room. They are versatile and suitable for various occasions.
3. **Dry Ice Fog Machines:** These machines use dry ice to create a thick, low-lying fog. While they can produce a stunning effect, they require careful handling and a more complex setup.
4. **CO2 Fog Machines:** These machines produce a thick fog using carbon dioxide, creating effects that dissipate quickly. They are often used in concerts and large events.
