- Exercise therapy
- Manual therapy
- Electrotherapy
- Patient education

The primary goal of physical therapy is to help patients recover from injuries, improve mobility, and enhance their quality of life.

What is Chiropractic Care?

Chiropractic care is a branch of healthcare that emphasizes the diagnosis and treatment of musculoskeletal disorders, particularly those related to the spine. Chiropractors use hands-on spinal manipulation and other manual techniques to align the body's musculoskeletal structure, allowing the body to heal itself without surgery or medication. Key components of chiropractic care include:

- Spinal adjustments
- Soft tissue therapy

- Posture and movement education
- Lifestyle modification guidance

Both physical therapy and chiropractic care aim to alleviate pain, improve function, and promote overall health.
